All students in Year 1-6 will have a 50 minute ICT lesson in the computer lab with Miss Rachel Mercuri.

YEAR 1 & 2 STUDENTS

In their weekly lesson, the students will learn the terminology associated with computer hardware. They will be using programs such as Kid Pix to develop their graphical skills, they will use word processing programs to develop their stories and reports, and they will use a number of programs specifically designed to aid their knowledge in the content areas in their classrooms. They will design simple animations and learn about Cyber Safety.

YEAR 3 & 4 STUDENTS

In their weekly lesson your child will be dealing with six main areas in the course of this year which are closely tied to other work occurring in the classroom. They are graphics, word processing, retrieving information from many digital sources, multimedia, Cyber Safety as well as specific skill development activities such as problem solving.

YEAR 5 & 6 STUDENTS

Your child will be dealing with seven main areas in the course of this year: graphics, word processing, retrieving information from digital sources, multimedia, Cyber Safety, databases as well as specific skill development activities such as problem solving.

The networking of the Lab with the classrooms means that students will have access to their files from any computer in the school so they can now complete work begun in the Lab back in their own classrooms.

Thank you
Rachel Mercuri
